How it works

- Regular maintenance is needed to ensure trouble-free operation and long life. Inverter cooling fans, electrolytic capacitors, circuit boards, fuses and brake control components are wearing parts and their failure will cause crane breakdown.
- Maintenance can be done at your site, or the inverters can be sent to the nearest Konecranes repair shop.
- There are three maintenance levels depending on the age of the D2V inverter.
- Each service level contains replacement of the mentioned components with original Konecranes spare parts, checking of the inverter connections, cleaning and maintenance reporting by a Konecranes specialist.
