

Fuel Saver

A low cost, compact retrofit system that can save up to 30% of fuel consumption without compromising performance or comfort.

Adapt and thrive

Konecranes is the premier port services provider to brownfield terminal developments. Our range of retrofit products will enable your fleet to adapt to a fast-changing environment. Welcome to your evolution.

Benefits

- Reduces CO2 / NOX emissions
- Lower speed produces less noise
- Components wear more slowly, so replacements are less often required
- In Fuel Saver mode the crane's RPMs drop to 50% of that in full diesel mode.
- All lighting and heating systems, e.g. cabin air-conditioning, remain fully functional during idling.

Fuel Savings

The following graphs show the fuel consumption, in litres used per hour, of six different RTG cranes with and without KONECRANES Fuel Saver (FS2) system installed. The readings were taken during 1 month of operation and show both total fuel consumption and fuel consumption whilst in standby (idle mode).

RTG
Rubber-Tired
Gantry Crane

How it works

- Electrical components are mounted either in crane's E-Room or in an outdoor cubicle on top of the E-Room
- Uses proprietary "DynACon" power converter
- Technology switches the diesel engine to idle rotational speed if no load condition is detected, or if a certain period of time has elapsed without movement instructions from the operator
- The moment the operator activates full controls again, the diesel engine returns back to normal RPMs.

What you need to know

- Customer needs to ensure prompt availability and safe work location
