KONECRANES ENGINE AIR PRECLEANER UPGRADE SOLUTION

PROLONG YOUR ENGINE LIFE.

The Konecranes engine air precleaner upgrade solution consists of an additional filter mounted above the traditional engine air filter, which adds a preliminary air cleaning stage to the standard process.

The air is cleaned twice before reaching the engine, reducing at minimum equipment downtime due to filter substitution.

This is a must in certain working locations, such as dusty mining or deserts environments

HOW KONECRANES ENGINE AIR PRECLEANER UPGRADE SOLUTION WORKS.

The Konecranes engine air precleaner filter prevents micro-abrasive dust from entering the machine's engine, prolonging the engine life. An additional level for cleaning provides more protection that's leading to very little or no down time.

BENEFITS.

- Decrease machine downtime
- Increase service intervals
- Increase productivity
- Increase engine lifetime

WHAT'S IN THE PACKAGE.
