KONECRANES CONTAINER CHECKING SAFETY SYSTEM

THE CONTAINER CHECKING SAFETY SYSTEM ENSURE EXTRA SAFETY IN DAILY CHECK-UP AND MAINTENANCE ACTIVITIES.

The Konecranes container checking safety system ensures your operators and service technicians a secure working environment during maintenance operations. By mechanically prevent the spreader (and container) to fall down, the container maintenance activities can be performed directly while the container is on the machine.

HOW KONECRANES CONTAINER CHECKING SAFETY SYSTEM WORKS.

The system (red supports) is mounted on both sides of the mast. While activated, the system is locked mechanically in horizontal position, preventing the spreader to move further down. The service technician can also block the machine from moving by pushing a button placed on left fender; with the gear in neutral, there is no possibility to use the hydraulic functions (no lifting / lowering) during the check-up. As an additional safety, a flashing 3-color lamp is mounted on the left fender, until the operator deactivates the system.

BENEFITS.

- Increase safety
- Decrease downtime due to container repair
- Quick and easy installation
- Konecranes own design

WHAT'S IN THE PACKAGE.

Inductive sensors
Machine stop box
Indicating light
Levelling cylinders
Wire harnesses
Hydraulic hoses
Software update
Mounting accessories
